GOOD COMMERCIAL VEINS. Preparations for a Busy Spring Throughou

RAVEN CO., REVIVED, TAPPING

the Camp-Labor Uneasiness in the Jalisco Mine Promise Rich Yield BUTTE, March 15.-The Raven Mining ompany, which had a skyrocket experience

about a year ago, will probably be reorganized and its capital stock increased. The company has some excellent property in the Raven and Snoozer lode claims. For loca-tion there are no better claims in the Butte district. The Raven, which has been developed to a depth of only 700 feet, not deep enough to reach the copper deposits, has produced a lot of good silver ore. Chiefly the company devoted its work to the Snooze claim, a six-nevenths interest, the Butte Coali-tion Company owning the other seventh. By an arrangement with the Anaconda company the Raven used the shaft of the Buffalo mine situated south of the Snoozer, the shaft being 2,000 feet deep, and by a further arrangement with the owners of the Old Glory claim, lying between the Buffalo shaft and the Snoozer claim, the Raven company drove a crosscut from the Buffalo shaft into the Snoozer and opened two veins in the latter ground, which were developed at the 800, at the 1,200 and at the 1,500 foot levels. On the lower level a lot of good commercial ore was found, but se far a opened the ore bodies were not continuous. A lot of ore was shipped and then, when everything looked bright for the company and its stock had advanced from 50 cents to \$7.50, the company went into the air. Withshaft from the Raven company, and the Butte and Boston Company, another Amalgamated concern, laid claim to the apex and ownership of the vein upon which the Raven company had done most of its work and on which it had been mining. W. D. Thornton, a close busibeen mining. W. D. Thornton, a close business associate of the Amalgamated officials in Butte, was at that time president of the Raven, and his close friendship with them inspired public confidence in the Raven.

All operations by the Raven ceased and no effort was made by the officers to test or dispute the claim of the Butte and Boston. Raven stock went back to 5e cents. Before the shutdown the Old Glory company was organized and one of the owners of that property claimed the second vein opened in the Snoozer and threatened injunction proceedings. He also made overtures for a consolidation of interests which were not considered by the Raven people. Now interest in Raven has been revived by various rumors, one of which is that the Rayen and Old Glory are about to be consolidated and that the Coalition and Amalgamated interests will be put in with the others to form a new company. As that is so contrary to the well known policy of the Amalgamated company little credence has been given the story in Butte, its place of origin being Boston. Propositions to that end have been made by Raven and Old Glory interests, but so far nothing has come of them. Another proposition upon which considerable efforts have been expended is to reorganize the Raven company, increase the capitalization and raise money with which to develop the Raven company, increase the capitalization and raise money with which to develop the Raven company is capitalized for only \$500,000, but it carries a bonded debt of \$30,000.

The North Butte Company cut two veins by the crosscut north from the 1,600 foot level of the Jessie mine, but the first vein is only about six feet wide and carries only very low grade ore. The second vein, cut in the Berlin ground, is reported to be about twenty-eight feet wide, and a large portion of it carries copper glance.

The north crosscuts run by the East Butte Company on the 400 and 600 foot levels have ness associate of the Amalgamated officials

eight feet wide, and a large portion of it carries copper glance.

The north crosscuts run by the East Butte Company on the 400 and 600 foot levels have opened several good veins, the lower cresscut having also encountered streaks of copper glance. The south crosscuts are in almost continuous ore. The company is mining and hoisting ore and making shipments to the Washoe smelter of the Amalgamated Company as rapidly as cars can be secured. The company has secured a new smelting rate from the Washoe as low as that granted any other mining company in Butte. It will make the building of a smelter by the East Butte Company. annecessary the building of a smeller by the East Butte Company.

A. A. McMillan, general manager of the Butte and London Copper Development Company, has made his first annual report covering the first year's work of the company. A three compartment shaft has been sunk to a depth of nearly 900 feet. One station was cut at the 400 foot point and a very large one

three compariment shall has been sunk to a depth of nearly 900 feet. One station was cut at the 400 foot point and a very large one at the 500. In sinking the shaft several large veins, carrying minerals, were cut. One of these veins, says Mr. McMillan, is sufficiently promising, so that some practical miners asked the company for a lease on it. However, the company refused to lease for the reason that work on the vein might open some new water chambers and let the water down the shaft, thereby making pumping more expensive. The policy of the company is to sink to the 1,500 foot level before doing any crosscutting or drifting. The reason for going so deep is that on the North Butte Mining Company a property, which approaches to within about 700 feet of the Butte and London ground, they have had to go to about the same depth before finding their great ore bodies.

The Butte & Bacorn Co. made a great record for shaft sinking in February. The shaft of the Calumet was sunk 105 feet and timbered the entire distance. The total depth of the shaft at that time was 730 feet. The three shafts being put down by the company on the Calumet. Belinda and Colleen Bawn are being sunk by contract. The Belinda shaft was down 630 feet on March 1, and the Colleen Bawn 300 feet. No sinking is being done in the latter at present, as the company is engaged in some exploration work on the 300 foot level. On the 590 of the Calumet some drifting is being done on two veins and the showing is regarded as excellent. The

foot level. On the 500 of the Calumet some drifting is being done on two veins and the showing is regarded as excellent. The Butte & Bacorn Co. is obening an entirely new section of the Butte district, two or three miles north of any producing mine, but every sign is favorable to the development of big

mes section of the Butte district, two or three miles north of any producing mine, but every sign is favorable to the development of big mines.

The Tuolumne Mining Company, which is developing the Tuolumne claim, situated south of the Speculator mine of the North Butte Company, has cut a two foot vein at a depth of 400 feet. It carries good copper values. The company intends sinking to a depth of 2,000 feet before doing any crosscutting or drifting.

The Elm Orlu Mining Company has been organized and capitalized for \$100,000 in shares of \$10 each. The incorporators and directors are W. A. Clark, W. A. Clark, Jr., W. D. Mangan, W. M. Bickford and C. E. McBroom. The combany is a new concern of Senator Clark and was organized to develop the Elm Orlu and Poser claims, situated west of the Blackrock group in the North Butte section of the district.

A report from Lewiston, Mon., has it that plans are being matured for a consolidation of the properties of the Barnes-King Development Company, the Kendall Mining Company and the North Moccasin Mining Company. The properties of the three companies adjoin. The North Moccasin Company, which is owned by John A. Drake and associates, contemplates the erection of a mill the coming summer. The Barnes-King is already engaged in rebuilding and enlarging its mill. The company owns the largest gold property in Montans.

The North Butte Extension Copper Mining Company has begun the erection of a developing plant on the Black Crow, one of its claims just north of the Butte and Ionachinery can be out in place sinking on a deep shaft will be begun.

Some of the Eastern stockholders of the Butte Copper Exploration Company have been in Butte during the last week, and an examination of the showing in the crosscut and drifts of the Six o'Clook property restored their confidence in the enterprise. There had been a great deal of disappointment among the Eastern shareholders because the veins were not found by the crosscut where they had expected they would be cut.

New York Haute of the Ba

out where they had expected they would be cut.

Supt. W. H. Brule of the Barnes-King Development Company reports good progress of the development work in the mines. Two winzes are being sunk in the Horseshoe and Muleshoe mines below the 500 foot leval. One winze is down 75 feet and the other 31 feet. When they reach a depth of 100 feet drifting will be done on the ore body. The winzes are in splendid ore. In the Santiago mine of the North Moccasin Company, adjoining the Barnes-King, an immense ore body has been opened a vistance of 117 feet. A closseut has been started north and south, and been opened a distance of 117 feet. A cross-cut has been started north and south, and the north wall was encountered in 10 feet. but the south crosscut, which is over 45 feet long, has not yet found the other wall of the van. This big ore body dips from the Daisy mine of the Barnes-King Company and gives the latter company a big ore body for mining. The Corbin Valparaiso Copper Mining. Company, with a capital stock of \$1,000,00 0 in shares of \$1 each, has been incorporated to operate in the Corbin district. The direc-tors are A. G. Grosso, H. J. Dewey, Thomas F. Casey, J. P. Daly, Frank E. Richards and J. D. Paul.
